

investment protection and scalability

- Leverages existing back-end systems
- Compatibility and integration with legacy applications, HP Nimius business modules, and third-party applications
- Java-based framework permits easy enhancement of functionality to meet customer needs
- Serves as a data-entry tool or a read-only tool

easy administration

- Centralized source for all contract management information
- Online help

features

Administration of:

- Customers
- Contracts
- Transactions
- User privileges
- Authentication
- Messaging
- Orders
- Users

e-contract management—centralized administration at your fingertips

HP Nimius E-Contract Management is a powerful, Java-based, back-end administration tool that allows financial institutions to efficiently view and manage customer and transaction data stored in the HP Nimius Operational Data Store (ODS) relational database. As a centralized source for all contract information, E-Contract Management simplifies access to and administration of customer and transaction details, including:

- Profiles
- Accounts
- Products purchased
- User authentication and authorization
- Roles and restrictions
- Addition, deletion, or restriction of electronic users by service, product, or benefits offered by financial institution

E-Contract Management consolidates customer data from disparate legacy applications and leverages your financial institution's current system through the ODS. Information needed for Internet banking, which is normally entered through the back-end system, is automatically forwarded to the ODS, which serves as the data pool from which all HP Nimius applications draw information. E-Contract Management is most powerful when used to view and update all data required for e-banking. If you decide to use your back-end system for data entry, E-Contract Management provides a read-only function that allows you to centrally view the information.

expandable solution

As an easily integrated and customizable solution, E-Contract Management guarantees investment protection by allowing you to rapidly expand your services and leverage other HP Nimius business modules at minimal cost. Applications are fully compatible with a variety of platforms including Microsoft® Windows®, Apple Macintosh, and HP-UX.

administration without compromise

As an easy-to-use, feature-rich application, E-Contract Management helps financial services institutions comprehensively manage customers and contracts.

customer administration

Offers the ability to set up, search, and modify customer information, including account number, name, address, and language. This data is leveraged by other administrative functions within the application.

transaction administration

Manages transactions for accounts, safekeeping/custody accounts, and bill payment, along with their related transactions.

contract administration

Allows search, creation, and modification of existing contracts.

user privileges administration

Facilitates the search for, creation, or modification of authorizations that allow financial institutions to commit transactions and obtain information about end users' assets and transactions.

authentication administration

Authenticates end-user rights and roles and permits the addition or deletion of products such as accounts and custody/safekeeping accounts within a contract. May also assign power-of-attorney rights to a contract.

messaging administration

Tracks correspondence between the end user and the financial institution, and provides mailbox administration.

order management

Enables the search, processing, and printing of customer orders and applications, such as informational materials, bank checks, and account applications.

user administration

Provides for the setup of contract management users, and defines their roles and rights.

banking on the hp nimius solution

When you choose the HP Nimius platform, you're opting for a reliable technology with a proven performance record. In installations throughout Europe, HP has delivered its solutions with a high degree of functionality and security to meet the needs of its customers and their end users. By providing easily customized e-banking applications, the HP Nimius platform offers a quick time-to-market. As a scalable and integratable solution, it guarantees your ability to expand well into the future as your financial institution grows to encompass new channels, functionality, and target markets.

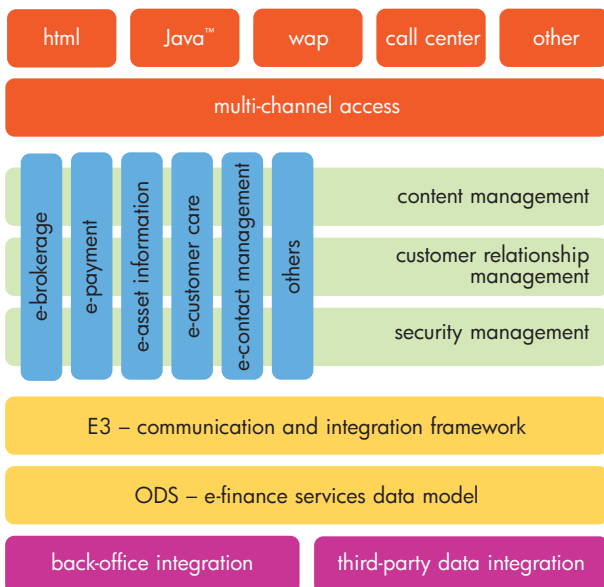

putting the pieces together

The E-Contract Management solution puts you in control of your ever-expanding pool of customer data. An easy-to-use, comprehensive, and powerful tool, it helps you gather information residing throughout the organization and enhances your ability to efficiently manage and track contracts. With comprehensive information at your fingertips, your organization will be able to provide faster and more efficient customer service demanded in today's marketplace.
